

**I-225 CORRIDOR**

**I-225 CORRIDOR FAST FACTS:**

Length (miles):	10.5
Vehicle Type:	Light Rail
Stations:	7
Parking:	1,800 new parking spaces
2025 Ridership:	15,200 – 17,800
Frequency of Service:	7.5 min (peak)/10 min (off-peak)

**I-225 CORRIDOR AT A GLANCE**

- The I-225 Corridor is part of FasTracks, RTD’s voter-approved 12-year comprehensive plan to expand quality transit service in the Denver metro region.
- The I-225 Corridor is a proposed 10.5-mile light rail corridor within the city of Aurora and will provide a key regional rail linkage between the East and Southeast rail lines.
- Seven stations are proposed for the I-225 Corridor, including Peoria/Smith, Fitzsimons Commons/Montview, Fitzsimons South/Colfax, 4th Ave/Abilene, Aurora City Center, Exposition and Iliff.
- The ridership projection is 15,200 – 17,800 per day by 2025.
- Final design and construction on the I-225 Corridor is scheduled to begin in 2011, with the line opening to the public in 2015.

**PROJECT OVERVIEW**

- Utilizing RTD's 2001 Major Investment Study (MIS) and 2005 Three Corridor Scoping Study, RTD identified the proposed alignment, station locations and defined light rail as the vehicle technology.
- In November 2004, the FasTracks initiative was passed by voters, providing funding for a regional rapid transit system, including the I-225 Corridor.
- In fall 2007, the environmental planning process began to assess the alignment, station locations and other environmental impacts based on the 2001 MIS.
- As part of the planning process, an Environmental Evaluation (EE) will be developed to include an analysis of alternative alignments and station locations, identification of potential impacts and a recommendation for ways to minimize and mitigate any impacts throughout the corridor.
- RTD will partner with the Colorado Department of Transportation (CDOT) and the Federal Highway Administration (FHWA) to provide the appropriate decision document for the portion of the corridor that will be built within the I-225 right-of-way.
