

**SOUTHEAST CORRIDOR**

**SOUTHEAST CORRIDOR FAST FACTS:**

Length (miles):	2.3
Vehicle Type:	Light Rail
Stations:	3
Parking:	2000 new parking spaces
2035 Ridership:	13,459*
Frequency of Service:	4 min (peak)/6 min (off-peak)

\*Ridership projection consistent with current project environmental documentation. Subject to change.

**SOUTHEAST CORRIDOR EXTENSION AT A GLANCE**

- The Southeast Corridor Extension is part of FasTracks, RTD’s voter-approved 12-year comprehensive plan to expand quality transit service in the Denver metro region.
- The Southeast Corridor Extension will extend the existing Southeast Light Rail Line 2.3 miles from Lincoln Station to RidgeGate Parkway in the city of Lone Tree.
- Three new stations are proposed for the Southeast extension, including a kiss-n-Ride, drop-off station at Sky Ridge Avenue near Sky Ridge Hospital, a kiss-n-Ride, drop-off station at the future Lone Tree City Center and RidgeGate Parkway, which will accommodate 2,000 parking spaces.
- The ridership projection is 13,459 day by 2035.
- Final design and construction on the Southwest Corridor Extension is scheduled to begin in 2011, with the line opening to the public in 2015.

**PROJECT OVERVIEW**

- From the Southeast Corridor/Lone Tree Light Rail Extension Limited Major Investment Study (MIS) that was conducted in 2003, RTD identified the proposed alignment and station locations.
- In November 2004, the FasTracks initiative was passed by voters, providing funding for a regional rapid transit system, including the Southeast Corridor Extension.
- In summer 2008, the environmental planning and basic engineering process began.
- As part of the planning process, an Environmental Evaluation (EE) is being conducted, including an analysis of alternative alignments and station locations, identification of potential impacts and a recommendation for ways to minimize and mitigate any impacts throughout the corridor.
- A final EE, as well as 30 percent basic engineering, is expected to be completed by winter 2009/2010.
