

West Corridor Supplemental Environmental Documentation

Supplemental National Environmental Policy Act (NEPA) documentation is required on FTA projects when there are changes in the proposed action or when there is new information. An Environmental Assessment for the West Corridor project is being prepared (which supplements the West Corridor FEIS/ROD) to assess the impacts of design refinements and changes being considered to contain construction costs.

Design refinements which are being assessed (as of February 2007) include:

- Changes in the vicinity of the Jefferson County Government Center station.
- An alignment shift between Indiana and the Federal Center.
- Installation of a single track from the Federal Center to the Jefferson County Government Center.
- Place LRT tracks on a bridge over Sheridan.
- Remove LRT maintenance facility.
- Reduce the frequency of service west of the Federal Center.
- Change floodplain design criteria.
- Auraria Station track and platform design changes.
- Narrowing the guideway by shifting the walkway.

The process to be followed for the EA includes:
